U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

The proposed after final amendment raises new issues that would require further consideration and/or search. The proposed amendment raises issues of new matter. The claims are now drawn to determining the amount of microorganisms from the reporter-primary antibody complexes detected wherein the method is performed in less than 8 hours. The new matter of the proposed amendment, is drawn to the method being performed in less than 8 hours. Applicants' point to pages 6-8 of the instant specification for support. However, page 7, lines 17, states that the incubation period can be less than 8 hours. There is no teaching that the method can be performed in less than 8 hours. Therefore the amendment is drawn to new matter. Furthermore, the proposed amendment presents 4 new claims without canceling a coresponding number of finally rejected claims. Thus, the proposed after final amendment will not be entered for the reasons stated above.

Therefore applicants arguments are most in view of the proposed amendments not being entered.

The rejection of claims 11 and 29-32 under 35 U.S.C. 103(a) as being unpatentable over Shih et al., (US Patent 4,026,767 published May 31, 1977) in view of Harlow and Lane (1986) is maintained. Applicant argues that the references teach away from the claimed invention because they disclose using a longer incubation period. However, it is the examiner's position that disclosed examples and preferred embodiments do not constitute a teaching away from a broader disclosure or nonpreferred embodiments. Therefore contrary to applicants' argument, the prior art does not teach away from the instant claims, since the instant claims assert no discovery beyond what was known in the art. Applicants' urge that the prior art does not recite teaching of formazan. However it is the examiner's position that the references failure to show a teaching of formazan is not recited in any of the rejected claims. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. Furthermore, one of ordinary skill in the art would have a reasonable expectation of success because one of ordinary skill in the art would have been motivated to make such changes in method since it is well known in the art of immunoassays to use antibodies specific and sensitive within the colorimetric assays taught by Shih et al. Thus, applicants' arguments are not persuasive and the rejection is maintained.

The rejection of claims 11 and 29-32 under 35 U.S.C. 112, second paragraph, is maintained for reasons of record. Thus, applicants' arguments are not persuasive and the rejection is maintained.
